

SENTRY

FEATURES

- 360° panoramic imagery
- Up to 4 HD virtual PTZ views
- IP connectivity
- 18 Mega Pixel sensor
- ONVIF PTZ compatible
- Web browser access for non-ONVIF deployments
- Streaming H264 (including VR format)
- Powered by PoE
- Image archiving
- Analytics 'Ready'
- Rugged, IP67 form factor
- No image distortion or 'stitching'

ADVANTAGES

- Captures everything, in all directions, all of the time
- Built to withstand tough environmental and usage conditions
- Assists situation reconstruction

BENEFITS

- Greater impartiality
- Improves understanding
- Generates public reassurance
- Supports accountability
- Improves performance
- Aids dispute resolution

360° Panoramic Surveillance

The SENTRY Camera

The Observant SENTRY Camera System is a 360° panoramic IP video camera.

SENTRY enables high-resolution visual documentation of everything occurring in the vicinity, ensuring that nothing is missed. SENTRY is designed to fit seamlessly into standard CCTV infrastructure.

The Challenge

All too frequently, even in an environment cluttered with CCTV and consumer video camera devices, vital evidence is missed.

Often cameras are pointing in the wrong direction and what video is available fails to reflect the true, or the complete nature of the situation.

The Solution

SENTRY has a "lighthouse" Field of View with no blind spots in the surveillance area of interest.

The vital contextual environment is fully captured to ensure a thorough understanding of the event and an accurate post incident analysis.

The Sentry Camera

SENTRY provides a persistent over-watch to ensure this critical data is captured.

With a single camera and using innovative technology, SENTRY visually documents the entire scene giving investigators the ability to recreate the operational environment and context post incident.

SENTRY can be used as a "nest" of up to 4 virtual PTZ cameras through an ONVIF compatible Video Management System, or through Observant's own monitoring and reviewing software.

PoE

Ethernet / IP

REVIEW

Reviewing the recorded images is simple with the free to use, highly intuitive, REVIEW software application. With versatile screen layouts, powerful timeline search and player controls, this tool simplifies investigation and incident analysis.

REVIEW provides instant local or networked timeline access for real-time playback of SENTRY live and previously acquired archives. Clips within an archive can easily be identified and exported.
