

## LONGVIEW 2

### Multi Environment Tactical Observation and Recording Solution

**The Camera:** Longview 2 is the latest and most cost effective ultra-long range observations and surveillance system on the market. Optimised for deployment in a wide range of environs it is particularly well suited to border, coastal, perimeter and mobile surveillance operations.

These camera systems are in daily use in some of the most demanding environments in the world and their durability and reliability is as impressive as their ability to see.

The Longview 2 camera incorporates ultra high performance optics that delivers a genuine 100x fully optical zoom capability. This, coupled with a multi sensor camera and a unique software solution, enables it to see that which eludes other more costly systems and specifically, without using complex, expensive and often unreliable thermal technology.

#### Our Markets:

**PTZ and Remote Operation:** The pan, tilt and zoom mechanism on the camera is designed and specifically matched to the extended range and performance demands of Longview 2.

**Radar:** Longview 2 is controllable using industry standard Pelco-D extended protocol. This provides absolute positioning and positional feedback. Should radar or perimeter intrusion detection systems be used that do not support Pelco-D extended protocol, we are able to write bespoke interface plug-ins for other systems.

### “Seeing is Believing”

#### FEATURES

- 6-100x optical zoom with 4 HQ camera sensors in one housing
  - Colour overview
  - Colour high resolution
  - Ultra low light (0.00003 lux)
  - Ultra high contrast sensor for fog, snow, rain and sand storms
- Switchable image stabilisation
- Automatic target tracking
- Rugged IP66 ‘hostile environment’ housing with low maintenance and very low power consumption
- Laser illuminator option available

#### BENEFITS

- Can be deployed in minutes as an independent system or it can be fully integrated as part of a networked solution
- Rapid deployment kit (RDK) available for tactical deployments
- RDK records for up to 30 days
- Specifically designed to meet the requirements of military, covert, policing and security sectors
- Now simple to carry out long range observations in the most demanding environs

**Rapid Deployment Kit:** Not all situations requiring long-range observation or surveillance can be anticipated or preplanned. Those that occur more dynamically at airports, in hostage situations and at incidents at remote locations often create the need for equipment to be deployed in a rapid and timely manner. Our Rapid Deployment Kit (RDK) has been specially designed with this in mind and consists of:

- 15" colour monitor with joystick controller
- 2TB DVR storage with 30 days recording capability @25FPS on 2 channels
- 2x video encoders
- Digital image stabilizer

The RDK can be remotely deployed within a Control Room or Green Room environment to provide incident commanders with full control over a remotely deployed Longview camera, whilst at the same time, recording events as they unfold and providing an instant record and review capability to help inform critical decision making.

For further information or to arrange a local demonstration of Longview 2 please contact our specialist advisors at: [sales@scenepro.co.uk](mailto:sales@scenepro.co.uk)

The ultra-low light camera in Longview 2 is **over 150x more sensitive** than industry standard CCTV cameras

**Power Management System:** Running off a standard 12V power supply, Longview 2 can be run from a car or leisure battery for extended periods of time. This feature makes it ideal for deployment in remote environments or where power is scarce.

**System Maintenance & Support:** As well as system operation training, our training covers system assembly and dis-assembly as well as basic troubleshooting. This provides users with the ability to deliver first line 'in the field' maintenance when required. All units are sold with 12 month return to base warranty as standard.

**Installation, Project & Technical Management:** Full onsite installation services and project management is available for our products.
